PERIODIC TEST-2 (2024)

MARKING SCHEME

Class : IX
Date : 02 -12-2024

Duration : 1 Hr
Max. Marks : 25

I. Multiple choice questions. 1 mark for each question.

1. SAS [A]
2. 50° [C]
3. 40° [C]
4. 180° [A]
5. 45° [D]

6. In ΔBOC and ΔAOD

$BC = AD$ given $\frac{1}{2}$

$\angle OBC = \angle OAD$ Each 90° $\frac{1}{2}$

$\angle BOC = \angle AOD$ Vertically opposite angles $\frac{1}{2}$

$\Delta BOC \cong \Delta AOD$ AAS rule

$AO = OB$ CPCT $\frac{1}{2}$

7. In ΔADB and ΔADC $\frac{1}{2}$

$BD = DC$ given

$AD = AD$ common $\frac{1}{2}$

$\angle ADB = \angle ADC$ Each 90° $\frac{1}{2}$

$\Delta ADB \cong \Delta ADC$ SAS rule $\frac{1}{2}$

$AB = AC$ CPCT

ΔABC is an Isosceles triangle. $\frac{1}{2}$

8. In ΔAOB and ΔCOD

$OA = OC$ (Radii of a circle) $\frac{1}{2}$

$OB = OD$ (Radii of a circle) $\frac{1}{2}$

$AB = CD$ (Given)

$\therefore \Delta AOB \cong \Delta COD$ (By SSS-criterion of congruence) $\frac{1}{2}$

$\angle AOB = \angle COD$ CPCT $\frac{1}{2}$

9. $\angle BEC + \angle CED = 180^\circ$ $\frac{1}{2}$

$\angle CED = 50^\circ$ $\frac{1}{2}$

$\angle BDC = 180^\circ - (50^\circ + 70^\circ)$ $\frac{1}{2}$

$$= 110^\circ \quad \frac{1}{2}$$

10. In $\triangle AMC$ and $\triangle DMB$

$AM = MB$	given	$\frac{1}{2}$
$\angle AMC = \angle DMB$	Vertically opposite angles	$\frac{1}{2}$
$DM = CM$	given	$\frac{1}{2}$
$\therefore \triangle AMC \cong \triangle DMB$ (By SAS-criterion of congruence)		
$\angle BDM = \angle ACM$	CPCT (i)	$\frac{1}{2}$
$\angle BDC + \angle ACB = 180^\circ$	co interior angles	$\frac{1}{2}$
$\angle BDC = 90^\circ$	(right angle)	$\frac{1}{2}$

11. $AB = AC$ [Given] ...(1)

$$AB = AD \text{ [Given] } \dots(2) \quad \frac{1}{2}$$

$$\therefore AC = AD$$

In $\triangle ABC$

$$\angle B = \angle ACB \quad \text{Base angles} \quad \frac{1}{2}$$

In $\triangle ACD$

$$\angle ACD = \angle ADC \quad \text{Base angles} \quad \frac{1}{2}$$

In $\triangle BCD$

$$\angle B + \angle C + \angle D = 180^\circ \quad \frac{1}{2}$$

$$\angle ACB + \angle ACB + \angle ACD + \angle ADC = 180^\circ \quad \frac{1}{2}$$

$$2(\angle ACB + \angle ACD) = 180^\circ \quad \frac{1}{2}$$

$$(\angle ACB + \angle ACD) = 90^\circ \quad \frac{1}{2}$$

$$\angle BCD = 90^\circ \quad \frac{1}{2}$$

12. Given : A circle with centre O, $OP \perp AB$

$\frac{1}{2}$

To prove : $AX = XB$

Construction : Join OA and OB.

Proof : In $\triangle OAX$ and $\triangle OXB$

$$OA = OB \quad \text{radii of same circle} \quad \frac{1}{2}$$

$$OX = OX \quad \text{Common} \quad \frac{1}{2}$$

$$\angle OXA = \angle OXB \quad \text{Each } 90^\circ \quad \frac{1}{2}$$

$$\triangle OXA \cong \triangle OXB \quad \text{RHS rule} \quad \frac{1}{2}$$

$$AX = XB \quad \text{CPCT} \quad \frac{1}{2}$$

13. $\angle AOB + \angle BOC = 60^\circ + 30^\circ \quad \frac{1}{2}$

$$\angle AOC = 90^\circ \quad \frac{1}{2}$$

$$\angle ADB = \frac{1}{2} \times \angle AOC \quad \frac{1}{2}$$

$$= \frac{1}{2} \times 90^\circ \quad 1$$

$$\angle ADB = 45^\circ \quad \frac{1}{2}$$
