Roll no:

Marking Key

SECTION- A

- (d) pot
- (d) Dandelion
- (b) Iodine
- (d) run cool water over burn
- (b) Clean the wound with soap and water

SECTION- B

- Common examples are coconut and lotus. 1+1
- To grow a new plant from a stem cutting, you need to take a healthy stem from a parent plant, cut it at a 45-degree angle, and then place it in a rooting medium like soil or water. 1+1
- A disease is a condition that disrupts the normal functioning of the body, resulting in a change in its structure or function. One example of a disease is the common cold, a respiratory illness. 1+1
- In case of a fracture, first aid involves keeping the injured area still, controlling bleeding if any, and applying cold therapy to reduce swelling and pain. 1+1

SECTION-C

10. Seed dispersal is the process by which seeds are carried to faraway places, allowing them to get enough water, light, and space to grow. 1+1+1

Different ways of seed dispersal include dispersal by wind, water, animals, and human beings.

11.

The differences between Kharif and Rabi crops are:

Kharif crop	Rabi crop
Kharif crops are grown from June to October and largely depend on monsoon rains. Examples: rice and maize.	Rabi crops are grown from November to April and do not depend on monsoon rains. Examples: wheat and mustard.

1+1+1

12. Vaccination is the act of introducing a vaccine into the body to build immunity to a disease. It's important because it contains weak or dead disease-causing germs, which help our body develop the ability to fight those germs, building immunity. 1+1+1

13. First aid box

1+1+1
