11. Case Study.

Anika and Rohan were looking at a world map in class. They saw a line across the middle of the Earth called the Equator. Their teacher explained that the Earth is divided into temperature zones:

The area near the Equator is called the Torrid Zone and is very hot.

The areas above and below are the temperate zones, which have mild weather.

Near the North and South Poles are the frigid zones, where it's very cold.

Anika pointed to Brazil, which is near the Equator, while Rohan pointed to Canada, which is far from the Equator.

Answer these Questions. (Any 4)

- a. Why did Anika say Brazil is hot?
- b. What kind of weather does Canada have, according to Rohan?
- c. What temperature zone has mild weather?
- d. How do temperature zones change as you move away from the Equator?
- e. Which zone would you pack warm clothes for?
