BK BIRLA CENTRE FOR EDUCATION

SARALA BIRLA GROUP OF SCHOOLS SENIOR SECONDARY CO-ED DAY CUM BOYS' RESIDENTIAL SCHOOL

POST MID TERM EXAMINATION (2024-25)

MATHEMATICS (041)

Class: XI Science
Date: 06/01/25
Admission Number:

Marking Key

General Instructions:

B K BIRLA CENTRE FOR EDUCATION

Question 1 to 5 carries ONE mark each. Questions 6 to 9 carries TWO marks each. Questions 10 to 13 carries THREE marks each.

- $\lim_{x \to 0} \frac{(1+x)^n 1}{x}$ 1 (A) n **(B)**1 (C) -n (D) 0 $\lim_{x \to 0} \frac{\cos x}{\pi - x}$ is equal to 2 $(\mathbf{B})\frac{1}{\pi}$ $(C) - \frac{1}{\pi}$ (A) 1 3 When we roll a die, then the events of getting odd numbers and even number, are (A) Mutually exclusive events (B) Exhaustive event (C) Both a and b (D) None of these
- A single letter is selected at random from the word 'FAVOURABLE". The probability that it 4 is a vowel
 - $(C)\frac{3}{r}$ $(B)\frac{2}{r}$ $(A) \frac{1}{5}$ **(D**)

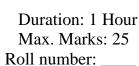

Assertion and Reasoning questions: In the following two questions, a statement of Assertion (A) is followed by a statement of Reason (R). Choose the correct answer out of the following choices.

- **(A)** Both A and R are true.
- **(B)** Both A and R are False.
- A is true but R is false. (C)
- A is false but R is true. (D)
- Assertion (A): If A and B are to events such that $P(A) = \frac{2}{5}$, $P(B) = \frac{3}{4}$, then $\frac{3}{20} \le P(A \cap B) \le \frac{2}{5}$. 5 Reason (R): P (AUB) $\geq \max \{P(A), P(B)\}$ and P (A \cap B) $\leq \{P(A), P(B)\}$

Evaluate: $\lim_{x \to 0} \frac{\sqrt{1+x}-1}{x}$, $x \neq 0$. 6

Ans: Rationalisation method to find limit value is 1/2

(D) Does not exist

7 Find the value:
$$\lim_{x \to \frac{\pi}{4}} \frac{\sec^2 x - 2}{\tan x - 1}$$

Ans: $\sec^2 x = 1 + \tan^2 x$, value is 2

8 If the probability that the home team will win an upcoming game is 0.77 and the probability that it will tie the game is 0.08, then find the probability that it will lose the game.

Ans: Required probability is 1-0.85 = 0.15

9 How many 2 digit positive integers are multiple of 3 and also find the probability that a a randomly chosen two digit positive integer is a multiple of 3.

Ans: 30 Integers, Required probability is 30/90 = 1/3

10 Find n, if $\lim_{x \to 2} \frac{x^{n-2^{n}}}{x-2} = 80$

Ans: $n(2)^{n-1} = 80 = 5x16 = 5x2^{5-1}$ therefore n = 5.

11 $\lim_{x \to 1} \frac{x^{4-1}}{x-1} = \lim_{x \to k} \frac{x^{3}-k^{3}}{x-k}$, then find the value of k.

Ans: $4(1)^3 = \frac{3k^2}{2k}$, $4 = \frac{3k}{2}$, 8/3 = k

12 Two dice are thrown simultaneously. Find the probability that both of them shows same face and both shows distinct faces.

Ans: Both of them shows same is 6/36 = 1/6

Both shows distinct faces is 30/36 = 5/6

13 A five digit number is formed by the digits 1, 2,3,4,5 without repetition. Find the probability that the number is divisible by 4.

Ans: Total numbers formed is 5! = 120, Favourable outcome is 24

Required probability is 24/120 = 1/5
